4K 120p (S35) / 60p (FF)

NEW **AI** PROCESSING UNIT

Pre-Capture
never miss a moment

4 Axis
multi-angle monitor

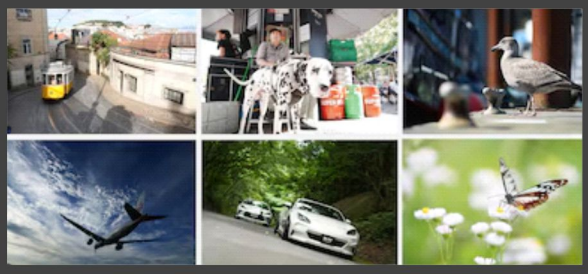

Excellent image quality

A partially stacked 33.0MP Exmor RS™ CMOS sensor paired with the BIONZ XR™ processing engine delivers up to 16 stops of dynamic range, smooth shadow-to-highlight gradation, advanced HDR performance, and exceptional low-noise image quality across ISO 100–51200 for both stills and video.

BIONZ XR2™ with integrated AI processing unit

The AI-powered BIONZ XR2 engine enhances image and sound quality, speed, and Real-time Recognition AF/Tracking, with accurate colour. The α7 V also adds a lightweight RAW format and refined UI, networking, and file management.

Real-time Recognition AF:* Wider subject recognition

Real-time Recognition AF supports Human, Animal, Bird, Insect, Car/Train, and Aeroplanes detection with Auto mode. The α7 V offers ~30% better animal and ~50% better
bird recognition* and now detects eyes of some grazing and small animals beyond dogs and cats.

Real-time Recognition AF*: Human pose estimation technology

AI processing in the new BIONZ XR2 engine delivers ~30% improved recognition over the α7 IV*. Advanced human pose estimation ensures reliable eye, head, and body detection even in challenging scenes, with support for recognising and tracking multiple subjects*.

30 FPS
Blackout-Free

4K 120p (S35) 60p (FF)

NEW AI PROCESSING UNIT

Pre-Capture
never miss a moment

4 Axis
multi-angle monitor

Pre-Capture & Blackout-free continuous shooting at up to 30 fps

Capture decisive moments from up to one second* before release with a half-press shutter. Shoot up to 30 FPS* with blackout-free electronic shutter and uncompromised AF/AE tracking, powered by up to 60 AF/AE calculations per second* for fast, fleeting action.

High frame rate 4K recording at up to 120p*

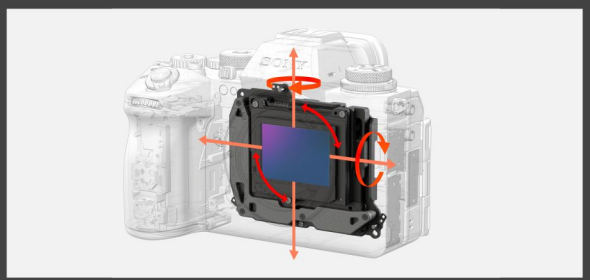

Internal 4K recording up to 120p* enables 5x slow motion, while Full HD up to 240 fps* allows 10x slow motion. Supports 4:2:2 10-bit, Long GOP, and All Intra formats. The BIONZ XR2 processor and Exmor RS sensor deliver full-frame, full-pixel readout with no binning,

producing highly detailed 4K 60p* footage with minimal moiré.

4-axis monitor maximises shooting flexibility

The 4-axis multi-angle monitor tilts up 98°, down 40°, sideways 180°, and rotates 270°* when open. The 3.2-type 2.1M-dot touchscreen offers a wide colour gamut and clear visibility in bright light, while Monitor Low Bright reduces brightness and battery drain during inactivity.

5-axis optical stabilisation for up to 7.5-step* central and 6.5-step peripheral* stabilisation

An advanced stabilisation unit with gyro sensors and algorithms corrects camera shake, offering up to 7.5-step* centre and 6.5-step peripheral stabilisation for steady handheld shooting. With compatible lenses*, shake is effectively suppressed even at telephoto focal lengths (yaw, roll, pitch).

Product images are for illustrative purposes only. Actual appearance, color, specifications, and features may vary by model. Sample images are for demonstration only; results may vary based on shooting conditions and user expertise.

THE TECHNOLOGY BEHIND

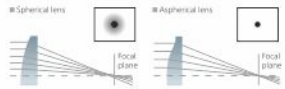

G MASTER

ED/ Super ED Glass
Reduces Chromatic Aberration

ED/Super ED Glass dramatically improve chromatic aberration at telephoto ranges, and provide superior contrast across the entire image, even at large aperture settings.

Aspherical Lens
Maintain High Sharpness & Contrast

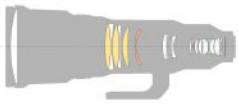

"Aspherical" elements can restore alignment at the image plane, maintaining high sharpness and contrast even at maximum aperture and reduce distortion.

XA Element
Suppresses Sagittal Coma Flare

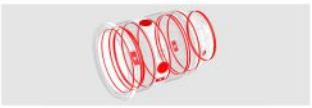

New XA lens elements achieve extremely high surface precision by innovative manufacturing technology, for an unprecedented combination of high resolution and the most beautiful bokeh.

[FE] Fluorite Element
Lightweight Without Compromise

Fluorite lens provide enhanced compensation for chromatic aberration. Fluorite is also lighter than normal optical glass, contributing to reduced overall lens weight.

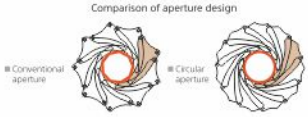

[DMR] Dust & Moisture Resistant
Durable Structure

The lens is designed to be dust and moisture resistant*, ensuring reliable operation when shooting outdoors in challenging conditions.

*Not guaranteed to be 100% dust and moisture proof.

Circular Aperture
Natural & Round Bokeh

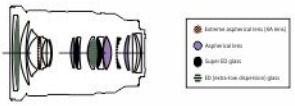

A unique design that keeps the aperture almost perfectly circular from its wide-open setting to when it is closed by 2 stops. Smoother, more natural defocusing can be obtained as a result.

[Floating F] Floating Focusing
Maintain Sharp, High-resolution Rendering

The floating focus mechanism achieves consistent high resolution from infinity to the closest focusing distance and helps to reduce all types of aberration.

[IF] Internal Focusing
Fast & Short Minimum Focusing Distance

Middle or rear groups of the optical system are moved to achieve focusing, which leaves the total length of the lens intact. Benefits include fast autofocusing and a short minimum focusing distance.

[IZ] Internal Zoom
Constant Lens Length

The length of the lens remains constant while zooming, and the barrel does not rotate so polarisers and other position-dependent filters can be used without the need for additional support.

[LR MF] Linear Response MF
Fast & Accurate Manual Focusing

The focus ring features high control resolution so that user input is precisely followed when focusing manually. The focus changes linearly in response to focus ring rotation.

[OSS] Optical Steadyshot
Easier Handheld Shooting

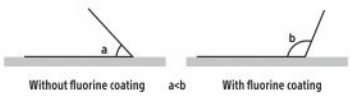

The provided Optical Steadyshot modes make it more convenient to capture sharp images in handheld shooting under various conditions

[OSS Mode] Optical Steadyshot Mode
Selectable Stabilization Mode

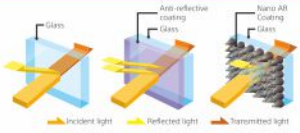

An OSS mode switch lets you choose mode 1 for general image stabilization, Mode 2 for panning movements, and Mode 3 for emphasizing framing stability when shooting moving subjects.

[F Coating] Fluorine Coating
Repels water & Grease

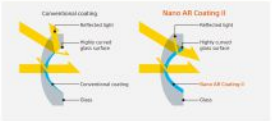

The exposed front element is covered with a fluorine coating that repels contaminants. Any water or oil based grime can be easily wiped away.

Nano AR Coating
Suppresses Flare & Ghosting

Nano AR Coating technology produces a lens coating that suppresses reflections that can cause flare and ghosting for consistently high contrast and clarity.

Nano AR Coating II
Minimize Flare & Ghosting

Nano AR Coating II is evenly applied to large lens elements or highly curved element surfaces, that suppresses internal reflections which causes flare and ghosting.

[XD LM] XD Linear Motor
Fast Accurate Auto-focus

The XD LM has been developed to deliver higher thrust and efficiency than previous types, in order to make the most of the rapidly evolving speed performance of current and future camera bodies.

[DDSSM]
Direct Drive Super Sonic Wave Motor
Quiet & Precise Auto-focus

DDSSM system is used for precision positioning of the heavy focus group required for the full-frame format, allowing precision focusing. The system is also remarkably quiet and ideal for movie shooting.

[RDSSM]
Ring Drive Super Sonic wave Motor
Smooth & Silent AF Operation

A piezoelectric motor contributes to smooth and silent AF operation. This produces high torque at slow rotation and provides immediate start and stop responses, and it contributes for silent autofocusing.
