WHAT IS 360 SPATIAL SOUND MAPPING

Feel sound from every direction and distance, even beyond the boundaries of your room with Sony's revolutionary 360 Spatial Sound Mapping technology. 360 Spatial Sound Mapping uses Sony's original distance measurement technology to calculate the distance between speakers and from the speakers to the ceiling, before combining it with physical sound field reproduction technology. The system uses built-in microphones to measure the relative positions of each speaker and reproduce sound wave fronts from up to twelve phantom speakers (simulated sound sources) that are assumed to exist somewhere outside of the physical speakers. As the simulated speakers exist beyond the actual speakers, they can make you feel as if you are in an extremely wide and expansive space that seems to extend beyond the room.

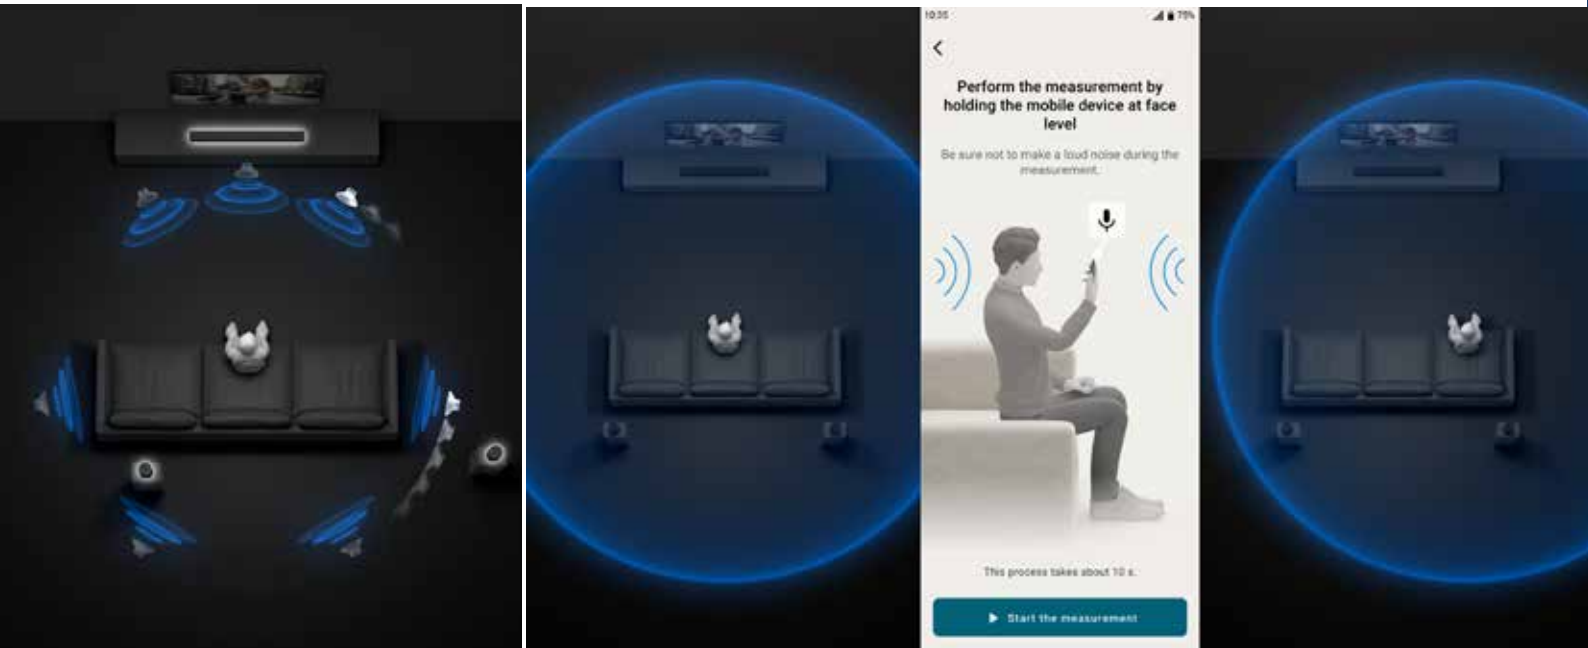

*HT-A9M2, HT-A9000 & HT-A8000

SOUND FIELD OPTIMISATION WITH BRAVIA CONNECT APP

Enjoy quality surround sound wherever you're sitting. Just run calibration with our smartphone app, BRAVIA Connect, and BRAVIA Theatre Quad will detect your position in the room and optimise sound to suit.

*HT-A9M2, HT-A9000 & HT-A8000

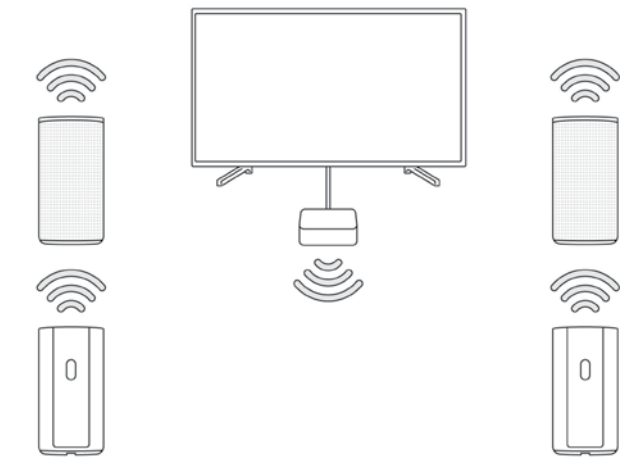

360 Reality Audio

Discover a new way of listening with 360 Reality Audio for a truly immersive live-concert or studio-session experience your music comes to life like never before.

BRAVIA Acoustic Center Sync

When connected to a compatible BRAVIA TV, the TV speaker plays the center channel role in your Home Theatre System and part of the 360 Spatial Sound Mapping setup. This enables sound to precisely match what's on the screen for a truly immersive experience you'll hear dialogue from exactly where the character is standing in the scene. Action and sound are precisely aligned so your viewing becomes much more immersive.

X-Balanced Speaker

X Balanced Speaker

The unique rectangular shape of these speakers maximises the diaphragm area for richer bass. It also reduces driver excursion while maintaining sound pressure, resulting in less distortion and greater vocal clarity.

Immersive Audio Enhancement

Immersive Audio enhancement can upscale the regular stereo audio to 7.1.2 Surround sound so every TV show and movie gets the surround sound treatment

Enjoy Your Music at Home

Easily access popular music services such as Spotify and stream your favourite albums and playlists with Bluetooth® using Chromecast, Apple Airplay 2 or Spotify Connect.

*HT-A9 & HT-A7000

DOLBY ATMOS®

REDEFINING YOUR ENTERTAINMENT EXPERIENCE

Dolby Atmos® transports you into your favourite movies with moving audio that flows around you with breathtaking realism. With Dolby Atmos®, Sony brings a new sensation of height that immerses you in the action, creating a full audio atmosphere and realistically depicting objects moving overhead. Dolby Atmos® also renders everything from dialogue to quiet scenes to whirlwind action with astonishing clarity, richness, detail and depth. Together with Sony's S-Force PRO Front Surround with wavefront technology, three-dimensional sound is more consistently experienced over a larger area, emulating a natural sound field, so you can feel birds chirping directly above you or the realism of an actual thunderstorm in your living room. It all comes together in three-dimensional sound that excites your senses and inspires your emotions to deliver the full impact of entertainment.

RE-CREATING THE DOLBY ATMOS® EXPERIENCE WITH SONY'S PROPRIETARY TECHNOLOGIES

With the development of two unique Digital Signal Processing technologies, the Dolby Atmos® sound field can be produced in your own home with just a single slim soundbar and subwoofer.

VERTICAL SURROUND ENGINE

S-FORCE PRO FRONT SURROUND SOUND

Vertical Surround Engine* – Sony's latest surround technology – lets you enjoy the thrill of Dolby Atmos® from a slim unit. Regardless of what type of room you're in, the front speakers reproduce "Vertical" audio without the ceiling while enabled speakers create virtual surround sound that seems to come from all around you.

VERTICAL SURROUND ENGINE

S-Force PRO Front Surround with wavefront technology delivers a wide horizontal surround sound field even without rear speakers.

S-FORCE PRO FRONT SURROUND

Together, these two technologies let you enjoy three-dimensional audio with up to 7.1.2ch surround sound experience. You'll feel yourself immersed in a full 360° sound atmosphere, so turn on the action and get ready for an incredible experience.

S-Force PRO Front Surround

Enjoy room-filling Surround Sound without the need for multiple speakers. With S-Force PRO Front Surround, music and movies are reproduced with captivating depth. Quality is delivered even for the most subtle and faintest of sound effects. Our wave-front technology delivers more natural, three-dimensional sound fields to a wider area all from a single soundbar and subwoofer using the full speaker array.

Movies and Games So Real

See vivid scenes full of real-life colour and depth. All of the original picture quality is preserved when played through the Sony Home Theatre System so you'll be completely immersed in movies a gaming aslo.

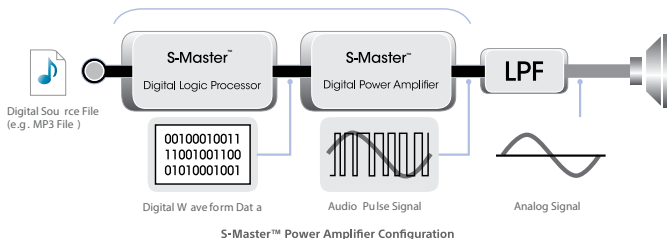

DTS:X

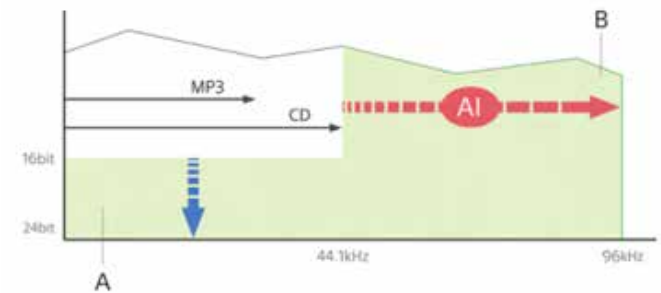

DTS:X decoding delivers multi-dimensional surround sound that adapts to your speaker configuration in real time. Sounds can be positioned precisely around and above you.

S-Master HX™

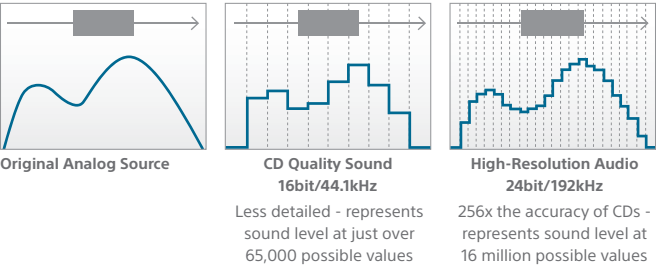

S-Master™ technology amplifies the digital signals without D/A conversion, so the purity of the original signal is maintained for highly-faithful sound reproduction. S-Master HX™ brings out the best in your Hi-Res Audio by reducing distortion and noise at a wide frequency range while reproducing high-frequency sounds for a clearer, acoustic experience.

DSEE Extreme

Using Edge-AI (Artificial Intelligence), DSEE Extreme™ (Digital Sound Enhancement Engine) upscales compressed digital music files in real time. Dynamically recognising instrumentation, musical genres and individual elements of each song, such as vocals or interludes, it restores the high-range sound lost in compression for a richer, more complete listening experience.

Hi-Resolution Audio

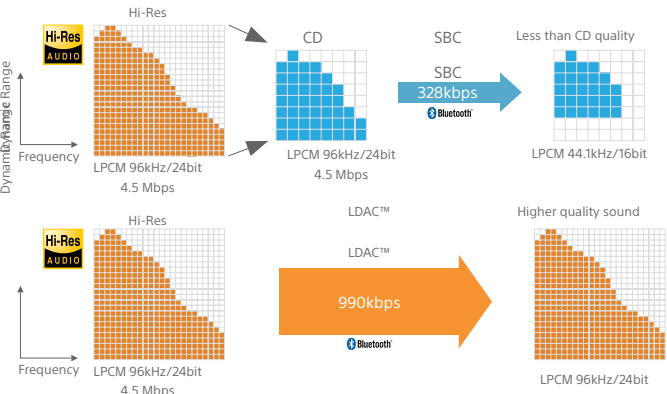

Music Artist Intended

Bring your favourite tracks to life. Discover subtle details, nuances, and clarity of sound like you've never heard before – like a live performance or live studio recording experience.

Hi-Res Audio is made possible by optimising original analog sources into a digital format. With a significantly higher sampling and bit rate compared to CDs, digitising sound tracks results in a larger amount of recorded data. The most commonly used specifications for Hi-Res Audio are 24bit/96kHz and 24bit/192kHz while CDs are standardised at 16bit/44.1kHz. This enables a more realistic, lifelike quality that is closer to the original analog recording.

LDAC™

Sony's LDAC™ audio technology allows you to enjoy Hi-Res Audio content in exceptional sound quality near to Hi-Res Audio by transmitting 3x more data than conventional Bluetooth® audio. LDAC™ provides an enhanced wireless listening experience for all your music, the way artists truly intended.

HT-A9M2

BRAVIA Theatre Quad

Hear sound beyond boundaries. With our unique 360 Spatial Sound Mapping technology, the HT-A9M2 immerses you, your family and friends in a multi-dimensional experience that takes movies and music to a whole new level.

Home theatre system with 360 Spatial Sound Mapping and Wireless Subwoofer

360 SpatialSound Mapping

360 SPATIAL SOUND MAPPING

360 Spatial Sound Mapping uses Sony's original distance measurement technology to calculate the distance between speakers and ceiling, before combining it with physical sound field reproduction technology. It has a built in microphone in each speaker to measure the relative positions of each speaker and reproduce sound wave fronts from up to twelve phantom speakers

IMEX Enhanced

IMAX ENHANCED

High definition IMAX sources distributed by BRAVIA Core and others can be played back on the BRAVIA and Bravia Theatre Quad to enjoy an IMAX theater experience in the comfort of your own home.

Dolby Atmos

Dolby ATMOS

Dolby Atmos® delivers breath taking realism with sounds that moves around you in three-dimensional space. A new sensation of height immerses you in the action, creating a full audio atmosphere and realistically depicting objects moving overhead.

BRAVIA Acoustic Center Sync

When connected to a compatible BRAVIA TV with Acoustic Centre Sync using the supplied cable, both the soundbar and the TV become the centre speaker in your home theatre system. Action and sound are precisely aligned so your viewing becomes much more immersive.

Sound Field Optimization

It will intelligently measure the distance between speakers and ceiling for a smart and easy set-up, before it generates a spatial sound field that fills the entire room. No longer do you need to rearrange your furniture or precisely position the speakers.
